

Mission Crisis: Disaster Response Message Classification

MCA 521-4 | ML
for Social Good
Challenge

The Real-World Crisis Problem

- **Information Overload:** Catastrophic floods and earthquakes trigger massive volumes of incoming distress calls across SMS, radio, and news feeds.
- **Triage Latency:** Manual sorting takes 6 to 12 hours, delaying critical first-responder deployment.
- **Prediction Target:** Binary classification request $\in \{0, 1\}$ (Urgent actionable need for
